myPhotoEdit released!

MOApp Software Manufactory

has crafted and just launched a new software program on the market: myPhotoEdit.

myPhotoEdit is the image editing application for really everyone.

myPhotoEdit is for the blogger with some experience in Photoshop wishing to quickly pimp an image for a blog entry up. It is for the untrained rookie wishing to easily edit an image for a presentation or the picture of the grandchild.

myPhotoEdit is done with ease-of-use and speed in mind, without compromising on features or quality. In truth the thoughtful and most of all time-saving features like presets for image-size, templates for quick-save or the high-class filters like Bleach Bypass, HDR and Lomo-Effect are very ease and intuitive to use. Yet, it's results are full-grown.

With myPhotoEdit you can open, edit and save every common image. Including the camera RAW format. Self-evident that it comes with the common editing features like color-correction, selection and luminance-sharpen you need.

You can test myPhotoEdit out in the demo version without any limitations by clicking on www.myownapp.com. myPhotoEdit is available at a reasonable price of 14 EURO.

myRichTexts is compatible with the Mac OS X 10.5.8 or higher.
